

JANUARY 2025 NACR QUARTERLY REPORT ON COMPREHENSIVE ASSESSMENT 1 (PRE-CR) (re-run using April 2025 extract)

(July to Sept 2024 data; patient records were included if they were recorded as starting/accessing Core CR within the time period and there was sufficient data – 10 or more patients starting/accessing CR AND having an Assessment 1 (Pre-CR))

Introduction: In the 2024 NACR Quality and Outcomes Report the data showed large variation in the completeness of pre- and post- assessments in terms of measuring all aspects of the BACPR core components. The three components of comprehensive assessment are risk factors, psychosocial wellbeing and exercise tests. Data showed that less than half of patients were starting/accessing CR with a comprehensive assessment 1 completed, which is a concern.

The measures included in the components are listed below.

Risk factors - including at least one of:

BMI, smoking, blood pressure, cholesterol, physical activity, alcohol consumption

Psychosocial wellbeing - including at least one of:

HADs, PHQ9, GAD7, Dartmouth, Minnesota

Exercise tests - including at least one of:

Incremental Shuttle Walk Test, 6-Minute Walk Test or Fitness level METs

Starting CR with a comprehensive assessment is essential for setting appropriate targets and goals and developing a structured programme to meet the needs of the patient.

The quarterly report analysed 177 programmes. Of these 4 were excluded due to insufficient starters in the period (<10 starters in the period), and a further 5 programmes were removed for having no assessment 1 records or insufficient for valid reporting (<10 assessment 1 records).

The included 168 programmes show that overall, 95% of patients have an assessment 1 completed.

For completion of risk factors, almost all of the assessments included contained measures recorded (99.6%).

For psychosocial wellbeing, 67% of patients had this completed at baseline whereas the exercise test had 58% completion.

This report includes the level of comprehensive assessment, which is an assessment that contains all three components. The report shows that 44% of the assessments recorded at baseline contained all three components. The lack of comprehensive assessment nationally is concerning as it means over half of patients are not receiving an objective exercise test and almost 40% are not being assessed for their psychosocial wellbeing.

At a programme level, there are examples of services recording data for all three components for 100% of patients. However, there also some services not reporting any components for some patients (0%).
