

JANUARY 2026 NACR QUARTERLY REPORT ON PATIENT DIAGNOSIS AND TREATMENT GROUPS PARTICIPATING IN CARDIAC REHABILITATION (rerun using April 2026 extract)

(Jul-Sept 2025 data; patient records were included if they were recorded as starting/accessing core cardiac rehabilitation (CR) within the time period and there was sufficient data – 10 or more patients starting)

Introduction: Delivery of Cardiac Rehabilitation (CR) to Priority Groups is one of the KPIs for the National Certification Programme for CR. The list of Priority Groups includes myocardial infarction (MI), myocardial infarction + percutaneous intervention (MI+PCI), PCI, coronary artery bypass graft (CABG) and heart failure (HF). This is reported annually, however, there is growing interest in other patient groups that are receiving CR. According to evidence, and on recommendation of the British Association of Cardiovascular Prevention and Rehabilitation (BACPR), conditions which are known to benefit from, and therefore should be offered CR, also include Stable Angina, CVD devices, Valve Surgery and TAVI. This report provides insight, at a programme, regional and national level, into the additional patient types that programmes are seeing outside of the Priority Groups.

The report looked at data for 180 programmes with starters in the period. Of these programmes, 172 had the minimum requirement for inclusion (≥ 10). The report indicates, across the three months, all the patient groups that commenced CR within each programme.

NB: The patient groups are organised in a hierarchy, in order to only count patients once; for example, patients that have a diagnosis of HF and a treatment of PCI are counted in the HF group and not the PCI group, as HF is higher in the hierarchy. (The hierarchy order is indicated in column one of the table below).

The initial table below shows the national picture in terms of numbers and proportion from each patient group. The largest proportion were all from the Priority Groups, MI+PCI making up 32%, followed by PCI only, HF/Cardiomyopathy, MI alone and CABG alone. When looking at proportion of programmes that included all Priority Groups there was 84% that had all groups included in their provision.

Outside of the Priority Groups the largest patient group was Cardiac Surgery including Mitral, Aortic and Tricuspid (7.6%) Other Events (2.4%) and TAVI (2.1%). The remaining groups, Angina, Other Treatments, had between 1.6-2.0%.

Looking across programmes, the surgery group was included in over 89% of services. However, the TAVI patients, grouped separately to wider surgery groups, are only seen by 52% of programmes. Patients from Other treatments, Angina and Other events were seen by 74%, 56% and 43% respectively. Further detail of this data at a programme or regional level – covering this period or a full year – is available on request from the NACR team.

Note: ongoing work on rolling out a new country-wide database in Northern Ireland is currently impacting data entry levels. We are therefore unable to include Northern Ireland programmes in this quarterly report at the moment.

Hierarchy Order	Condition	Count of Patients who Started Core CR with Diagnosis/Treatment	% of all Patients by Diagnosis/Treatment (n=15948)	Count of Programmes that Included Patients with Diagnosis/Treatment	% of Programmes that Included Patients with Diagnosis/Treatment (n = 172)
1	MI with Heart Failure	614	3.9%	133	77.3%
2	Heart Failure/Cardiomyopathy	2139	13.4%	161	93.6%
3	MI and CABG	547	3.4%	144	83.7%
4	MI with PPCI/PCI	5025	31.5%	171	99.4%
5	MI alone	1653	10.4%	163	94.8%
6	CABG	1273	8.0%	167	97.1%
7	PCI	2176	13.6%	164	95.3%
8	Angina Without Revascularisation	320	2.0%	96	55.8%
9	TAVI	341	2.1%	89	51.7%
10	Cardiac Surgery (Including Mitral, Aortic and Tricuspid)	1216	7.6%	153	89.0%
11	Other Treatment (e.g. CVD Device, Transplant, Medical or Other)	389	2.4%	128	74.4%
12	Other Event (Including High Risk, Arrhythmia/Cardiac Arrest, PAD)	255	1.6%	74	43.0%
Total		15948			

Note – In order not to count patients twice in different groups, patients are assigned in a hierarchical order. This means that if a patient has diagnosis/treatments from two different groups (for example Heart Failure with a PCI), the patient is counted under the group highest in the hierarchy order only - i.e. in the example, under HF not PCI.
