

July 2023 NACR QUARTERLY REPORT ON ETHNICITY AND COMPLETION (Rerun using September 2023 extract)

(Jan to Mar 2023 data; patient records were included if they started Core* Rehab within the time period and there was sufficient data – 10 or more core rehab records with a start date created - within the named programme)

This is the eighth Quarterly Report for NACR and continues to detail the demographic characteristics of patients that attend and complete cardiac rehabilitation (CR). This report, along with others this year, focuses on the details around the Completion of Core CR at a local service level for England, Northern Ireland and Wales.

This report selects patients based on those with a start date for Core CR between January and March 2023 and looks at the level of completion across programmes by Ethnicity, which is shown in wider research to highlight inequity in the participation of CR and other health care settings. The table splits the patient group across six ethnicity groups (subgroups merged due to small numbers, note more granular local breakdown is available upon request) and presents programme completion rates within these categories.

There was a wide spread of completion across the ethnic groups, and local variation between programmes, some of which may be affected by small sample sizes. Taking the average across different ethnicity groups, the Mixed/Multiple ethnic groups had the highest rate of 93.8%, followed by the Asian/Asian British group (73.0%), Black/African/Caribbean/Black British group (72.1%) and White group (72.0%). The Other group had a lower completion rate, which should be investigated at a local regional and programme level. There is also a significant number of programmes with little to no data for certain ethnic groups. This may be a true representation of the demographic of the population, however, if there is inequality throughout the pathway, it may be presented by the lack of starters from different ethnicity groups in this report.

Data caveat – In this month's report, along with showing categories with 'No Records', we are also suppressing % completion where the subgroup has fewer than 5 patients for a programme. This is to avoid misleading values. However, please note that smaller the number of patients the more likely this is not a true representation of breakdown.

(* Throughout this report 'Core' refers to Core or Phase 3 records)

England sorted alphabetically by Network then Programme/Trust
