

JULY 2025 NACR QUARTERLY REPORT ON MULTIMORBIDITY PROFILE IN STARTING/ACCESSING CARDIAC REHABILITATION POPULATION (re run using October 2025 extract)

(Jan-Mar 2025 data; patient records were included if they were recorded as starting/accessing Core Cardiac Rehabilitation (CR) within the time period and there was sufficient data – 10 or more patients starting and with comorbidity data recorded.)

Introduction: Cardiac Rehabilitation (CR) is identified as being an effective secondary prevention intervention for patients with cardiovascular diseases (CVD) and, in addition, addresses many risk factors that are shared with other conditions such as hypertension, diabetes and cancer. For many years CR services have seen patients with a variety of different comorbidities and NACR has previously reported that over half of patients attending CR have two or more conditions in addition to their CVD (NACR 2021)

The level of recording of comorbidities across all starters was **83.8%**, indicating that >16% of starters had no comorbidity recorded. The spread nationally of patients with additional conditions is shown in this report. The most common comorbidity recorded was hypertension (49.3%) followed by other comorbid complaint (37.5%) and hypercholesterolaemia/dyslipidaemia (34.4%). In more than 10% of patients, diabetes (25.6%), family history of CVD (23.5%) and Arthritis (14.6%) were common. There were six comorbidities where more than 5% of the population have these in addition to their CVD diagnosis. This report covers a three-month period, extending this to a full year a comorbidity that has 5% or more equates to more than 2800 patients attending CR with that comorbidity.

Comorbidity	Count of Patients Accessing/Starter CR with Each Comorbidity	Proportion of Patients Accessing/Starter CR with Each Comorbidity (%)
Angina (%)	1518	10.9%
Anxiety (%)	1088	7.8%
Arthritis (%)	2040	14.6%
Asthma (%)	1349	9.7%
Cancer (%)	1248	9.0%
Chronic Back Problems (%)	1110	8.0%
Chronic bronchitis (COPD) (%)	498	3.6%
Claudication (%)	190	1.4%
Depression (%)	1196	8.6%
Diabetes (%)	3565	25.6%
Emphysema (COPD) (%)	360	2.6%
Erectile Dysfunction (%)	362	2.6%
Family History (%)	3282	23.5%
Hypercholesterolaemia/Dyslipidaemia (%)	4802	34.4%
Hypertension (%)	6875	49.3%
Osteoporosis (%)	282	2.0%
Other Comorbid Complaint (%)	5228	37.5%
Rheumatism (%)	283	2.0%
Stroke (%)	627	4.5%
No/None (%)	1046	7.5%
Additional Combined Comorbidities (%)*	2269	16%
*Additional Combined Comorbidities is an aggregated measure of conditions that individually have fewer than 5% of patients recorded. These are combined in the programme level report and include Chronic Bronchitis (COPD), Claudication, Emphysema (COPD), Erectile Dysfunction, Osteoporosis, Rheumatism and Stroke.		

The Quarterly Report shows all programmes with at least 10 patients in a three-month period (Jan-Mar 2025). As the total number of patients for this period can be small, and some conditions at a national level have <5% of the reported population by proportion, the seven comorbidities that have <5% (highlighted in grey in the above table) have been grouped together – Additional Combined Comorbidities. Note, all named conditions are non-exclusive, thus patients can be included in more than one condition but are only counted once in the additional comorbidities' column.

The report analysed 184 programmes. Of these, 9 had insufficient number of patients starting (<10), and 9 services had <10 patients with comorbidity data completed therefore these programmes could not be included.

A total of 166 services were reported on fully. While the national trend is often replicated at a local level, there were some services that show a significantly different comorbidity profile. There are specific areas where anxiety, depression and chronic back pain were 10-20% greater than the national profile, and hypertension was a comorbidity for >60% of all patients starting/accessing CR in 34 services. This report highlights that, firstly, local variations in populations exist and secondly, services need to be aware of and record comorbidity in order to truly tailor the intervention for each patient's unique comorbidity profile.

If services wish to look at the smaller comorbidity groups in more detail or see the data over a full 12-month period, please contact the NACR team.
